Sample Program 8.2

About Void Functions

Problem statement. Write a void function named `me`, with no parameters, which prints your name to the console.

 Solution.

```
def me():
  print("your name")
```

Problem statement. Write a void function named `average`, with three parameters, that prints to the console their average (including any fractional part).

Solution.

```
def average(a, b, c):
  total = a + b + c
  average = total / 3
  print(average)
```
